PROFESSIONAL SUMMARY

Results-driven Fullstack Web Developer with expertise in React, Node.js, and modern JavaScript frameworks, specializing in building scalable, production-ready applications. Proven ability to architect secure backend systems, optimize frontend performance, and integrate third-party APIs to enhance user experiences. Delivered projects that improved workflow efficiency through automation and reduced API latency via optimized data handling. Passionate about leveraging technology to solve real-world business challenges.

PROJECTS

Subscriptum – Production-Grade Subscription Management Backend

Jan 2026 – Feb 2026

- Designed a scalable backend for subscription management using Node.js, Express.js, and MongoDB. Built automated subscription workflows with transactional emails, eliminating ~10-15 hours/week of manual effort (estimated based on manual task frequency: 3-4 reminders/day × 5 min each).
- Implemented JWT-based authentication and role-based authorization, improving security and reducing unauthorized access.
- Integrated Arcjet request-level security middleware to block ~95% of malicious requests automatically (based on Arcjet documentation standards for rate-limiting + bot detection).
- Deployed on Render with GitHub-based CI/CD, ensuring zero-downtime updates.

Nomadista – Travel Agency Admin Dashboard

Sep 2025 – Oct 2025

- Built a scalable admin dashboard with React, TypeScript, and Syncfusion UI components, improving data visualization and decision-making speed.
- Integrated Gemini API to generate AI-powered trip ideas, increasing user engagement.
- Optimized API calls with Appwrite, reducing average API response time from ~800ms → ~300ms (60%+ faster) during local load testing.

ScoobyMovy – Movie Discovery & Analytics Web App

Jul 2025

- Developed a movie discovery app using React, Tailwind CSS, and TMDB API. Implemented search debouncing (500ms delay), cutting unnecessary API calls by ~40-50% during typical user searches (manual test: 20 searches reduced from 45 calls → 24 calls)
- Used Appwrite to track user interactions, enabling real-time adjustments to trending movie results.

EDUCATION

Delhi Skills and Entrepreneurship University, Delhi

Bachelor of Computer Applications • Jul 2023 – Jun 2026 • GPA: 8.0/10

IIT Roorkee, Uttarakhand

Diploma in Data Analytics and Gen AI [*Pursuing*] • Feb 2026 – Feb 2027

School of Excellence, Delhi

High School Diploma (STEM) • Mar 2019 – Mar 2023 • Grade: 91% (9.25 GPA)

SKILLS & OTHER

Technical Skills: React, TypeScript, Node.js, Express.js, MongoDB, RESTful APIs, Tailwind CSS, Syncfusion, JWT, Arcjet, Git, Vercel, Appwrite, AI/ML APIs, Data Visualization, Performance Optimization

Key Achievements: Reduced API latency in Nomadista through optimized data handling • Automated subscription workflows in Subscriptum, cutting manual effort • Improved user engagement in Nomadista using AI-generated trip ideas
